

REO Processing, Inc.

Pellet Shortage Press Release

The February freeze in Texas and the global disruption of supply chains has forced over 10 plastic manufacturing plants to claim force majeure. When every pellet is critical to meeting customer demands, it is important to use every weapon in your tool belt to save offspec material and maximize production efficiency.

- REO Processing offers an extensive set of processes that can help reclaim resin pellets and powders that are off spec due to a variety of reasons. Metal Contamination: Our multiple lines can remove everything from nuts and bolts to embedded stainless steel particles.
- Carbon Speck: Our optical sorters can remove down to 60-micron carbon speck. We offer sorters located in clean rooms.
- Colored or Burnt Pellets: We offer the newest technologies in optical sorting to remove dark, burnt and mixed colored streams.
- Longs, Marriages and Fines: Classification processing for sizing materials.
- Izod, Melt Flow Issues: Our blending operations can bring off spec batches into spec by blending multiple streams with different characteristics.

Our facilities are located in West Virginia (Parkersburg, Nitro, Kenova, Huntington), Texas (Angleton, Freeport, Waynesboro, Virginia and Baton Rouge, Louisiana. Let us help you during these difficult supply chain times.

Please contact Gregg Frazier (Gregg.Frazier@reoprocessing.com), President, for more information.
